## Active Workspace

As we work longer hours and the landscape of the modern office continues to shift, our health and wellbeing while at work are more important than ever.

Finding work tools that adjust to the user, promote spontaneous movement and counter the negative effects of sedentary behavior is key for wellness at work. The active workspace is a thoughtful new concept that encourages balance, so workers can build more activity into their daily routine for long term health.

The active workspace doesn't require constant movement, but encourages gentle activity throughout the day to foster health, wellbeing and productivity.

## Float®

The key to remaining healthy while at work is to alternate between standing and sitting positions. Float makes standing almost effortless and instant. By eliminating awkward cranks and noisy, slow motors, Float removes obstacles that typically discourage the use of height-adjustable desks. Operating Float is as easy as standing up.

## Quickstand™

QuickStand makes sit-to-stand easy and portable. With the ability to move with or independently of the screen, QuickStand's lightweight platform allows the desk to adapt to the user's changing comfort demands. Unlike other height adjustable solutions on the market, QuickStand can effortlessly be moved from one work surface to another.

# Seating

At Humanscale, we believe that the highest level of functionality is achieved through simplicity. With our chairs, we replace heavy, complex mechanisms with the sitter's own body weight and the laws of physics to encourage movement, providing the most comfortable chair available.

## Monitor Arms

With more people working off flat panel monitors than ever before, a flexible, strong and adjustable monitor arm is an essential tool in the modern office. Humanscale's range of robust monitor arms offer extreme stability, sleek designs and effortless functionality, and instantly create a more flexible, dynamic workstation.

## Keyboards

A key component of our essential ergonomic workstation, Humanscale's range of articulating keyboard systems instantly transform your posture to maximize comfort and wellness at work. They also help prevent injury, reduce hunched typing postures and minimize the risk of musculoskeletal disorders such as carpal tunnel syndrome.

## Ergo Tools

Our ergonomic solutions support the Essential Workstation by providing additional comfort and reducing stress. Keep desks clutter-free with our cable management solutions and CPU holders or get relief for your feet with our footrests.

## Lights

Humanscale's innovative task lights were designed, like all our products, with performance, simplicity and beauty as their drivers. Our intuitive task lights help to reduce eye strain, improve computer-based reading comfort and reduce energy use and costs. All of our task lights feature a sustainable design and use advanced LED technology, so the user can work in comfort and companies can shrink their carbon footprint.

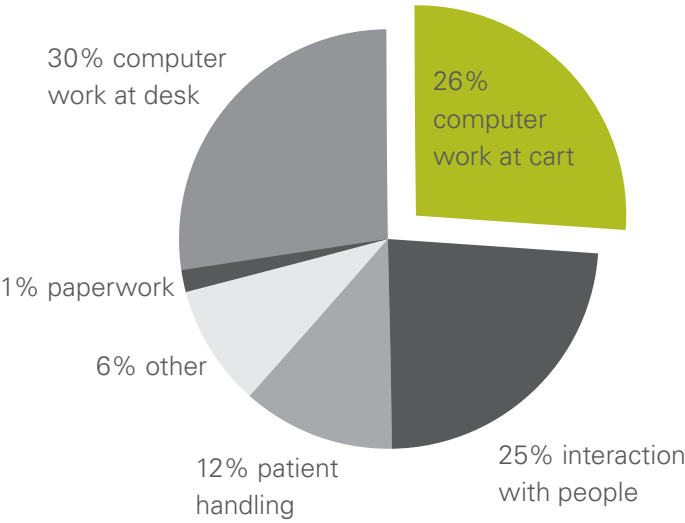

# Humanscale

## The Global Leaders in Healthcare Ergonomics

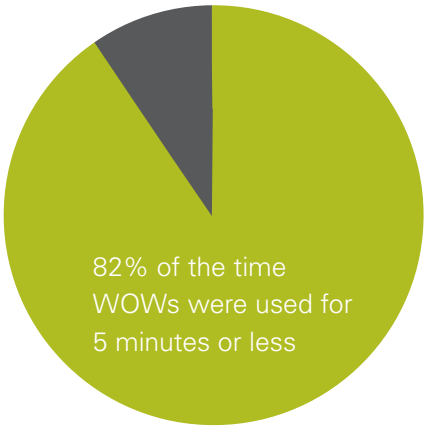

At Humanscale Healthcare, we believe better care can be achieved through better design. As the global leader in healthcare ergonomics, we create products that maximize caregiver comfort, allowing for the best delivery of care possible.

Keeping Caregivers Safe

A 12-hour shift had 6.75 hours of computer work done in 4 minute intervals.

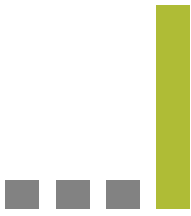

3.6 minutes is the average time nurses spent at the Workstation on Wheels. (WOW)

Injured nurses contribute to about **one-fourth** of all workers' compensation claims and one-third of total compensation costs.

Nurses are **200%** more likely to suffer from job-related injuries than farmers or construction workers.

Healthcare workers have a rate of musculoskeletal disorders **7 times** the national average.

# T7 Mobile Technology Cart

Built for exceptionally intuitive one-hand operation, the T7 is a revolutionary innovation in the TouchPoint line of medical technology carts. Its Auto Fit™ technology instantly adjusts to each caregiver's entered height, while its Power Track™ steering allows for virtually effortless maneuvering and complete user control. With a beautifully simple design, the T7 makes cleaning easy and promotes a healing environment.

## Awards

reddot design award  
winner 2013

## Accommodates a Wide Range of Users

Using revolutionary Auto Fit technology, the T7 instantly adjusts to the height that each user enters into the digital command center. This encourages ergonomic posture for the vast majority of users, whether they are seated or standing.

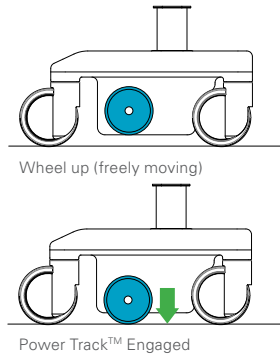

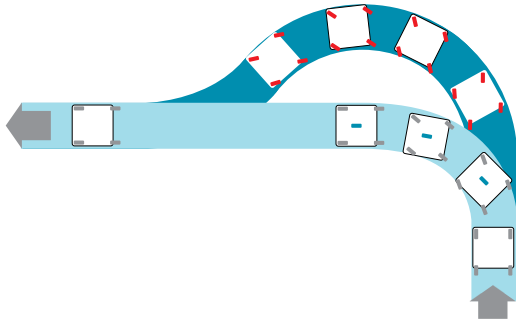

## Intuitive Ergonomic Design

In addition to its low center of gravity, the T7 offers convenient one-hand operation, if necessary, and cart controls that are within a comfortable, ergonomic range.

## Ultimate Mobility and Ease of Use

With the T7's Power Track™ steering, caregivers can effectively navigate tight spaces, corridors and turns with one-hand operation for care on the go. Power Track is conveniently actuated with an effortless squeeze of button on the underside of the cart handle.

## T7 Accessories

The T7's modular form allows for easy upgrades and additions. And, to ensure unobstructed maneuverability, all of its accessories are within the footprint of the cart.

### Available Accessories

|                                    |                  |                      |
|------------------------------------|------------------|----------------------|
| Scanner Bracket                    | Utility Basket   | Printer Shelf        |
| Sharps Bin Holder                  | Glove Box Holder | Upper Mouse Platform |
| Utility Drawers (up to 4 per cart) |                  |                      |

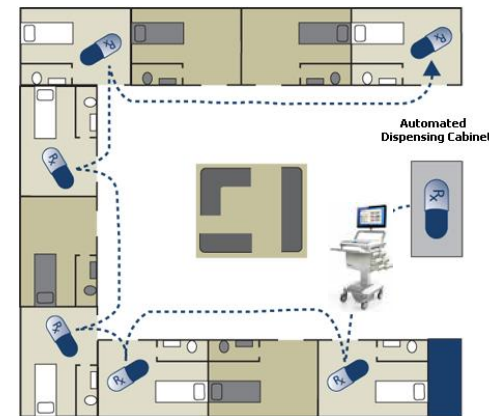

## Infection Control Advantages

The T7 sets a new industry standard in wire management, as all wires are hidden and shielded in wire management troughs, which eliminates the requirement for cleaning of unsightly cables and wires.

## MedProx Medical Distribution

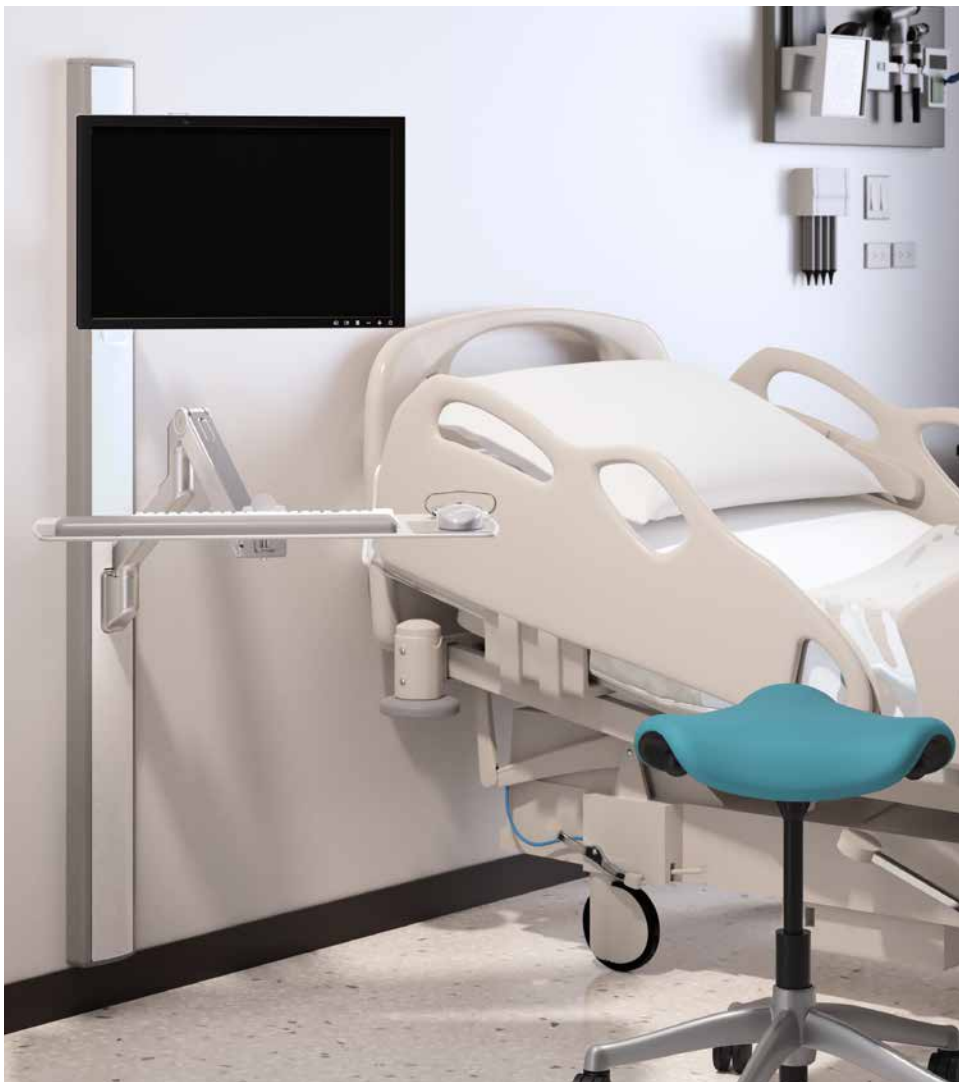

Utilizes a MedProx Cabinet on a mobile cart for secure storage and transportation from an automated dispensing cabinet, to the point of care.

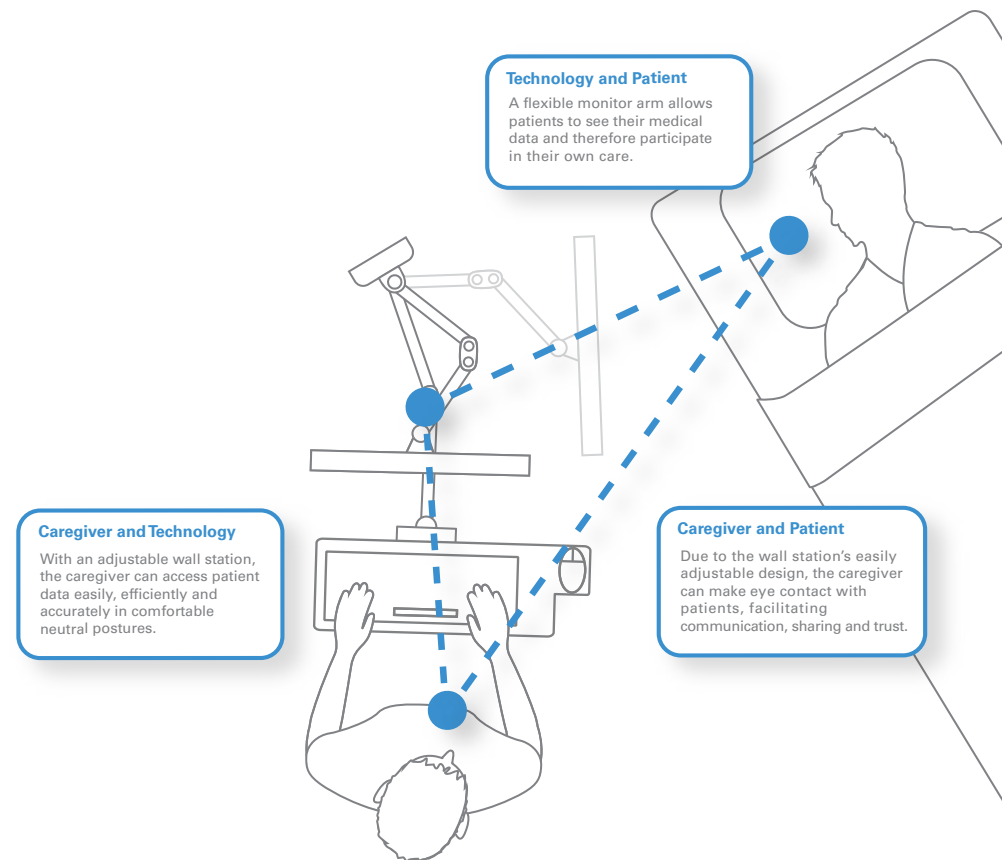

# ViewPoint Technology Wall Stations

Humanscale's ergonomic wall stations accommodate the technological demands of the clinical setting while encouraging patient/caregiver interaction at the point of care.

## Triangle of Care

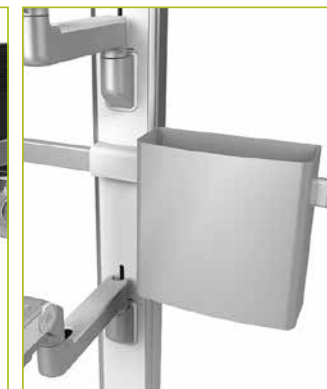

Humanscale offers a variety of products that can be properly installed and integrated in your healthcare workspace while maintaining the important triangle of care — the interaction formed between the caregiver, data and the patient.

## V/Flex™

Offering best-in-class ease of use, V/Flex makes care giving more comfortable. V/Flex accommodates 98% of caregivers in sitting or standing postures, and is available in a variety of configurations to facilitate patient-caregiver interactions. With sophisticated cable management, V/Flex promotes infection and clutter control for a safe, healthy environment.

### ViewPoint Accessories

The ViewPoint's Accessory Rail allows for easy upgrades and additions. It is designed to keep all of the accessories within easy reach of the caregiver.

#### Available Accessories

Scanner bracket

Charts container

Hand sanitizer

Sharps bin holder

Glove box holder

Accessory handle

## V6

The V6 technology wall station makes care giving simple, so the caregiver can focus on what matters: the patient. It also features a sophisticated and customizable cable management system for easier cleaning. The V6's calming, streamlined aesthetic complements the modern healthcare environment.

### V/Desk

Features a resilient nylon work surface with a keyboard tray beneath that slides in and out, as well as a mouse holder. The V/Desk saves space with ease by enabling caregivers to move the unit out of the way when not in use, and the unit can be folded up within close proximity to the wall.

### Wire Management

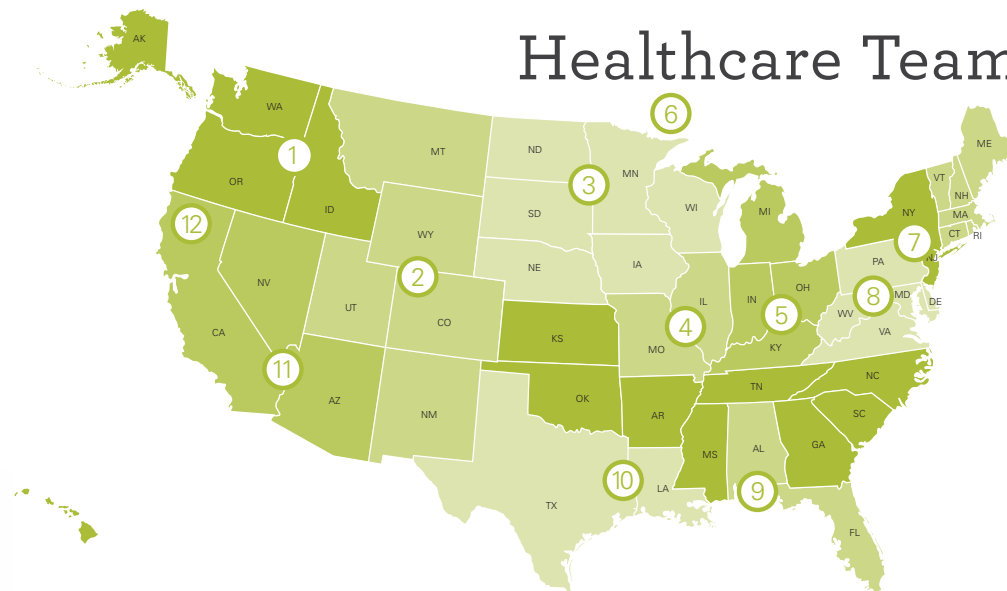

Superior cable management mitigates clutter—and infection—control concerns.

# HealthPoint Technology Cabinets

The H1 can be configured in a 4" (100 mm) or 6" (150 mm) model (depth of product extending from wall) for versatility. An electronic keyed entry for caregivers and keyed entry for IT staff provides ultimate security. Wire management mitigates infection-control concerns. The H1 accommodates monitors up to 24" (609 mm) to support larger screens and the vertical and horizontal VESA adjustment offers the ability to center the monitor within the cabinet.

# Consulting Services

Humanscale Consulting's board-certified ergonomists provide ergonomics expertise to improve the health and well-being of technology users through the design and implementation of ergonomics programs.

- Strong experience in office, healthcare and laboratory settings
- Research-based, practical approach to workspace improvement and program implementation

Our team of proven ergonomics professionals deliver high quality ergonomics trainings across the globe:

- Group training and assessment programs
- Train the Trainer programs

## Humanscale and the Environment

Humanscale takes sustainability seriously. As a global company, our approach focuses not only on minimizing our negative impacts but working to produce significant positive contributions. Our goal is to make a net overall positive impact on the Earth.

We engage in maximizing our positive impacts through conservation, preservation and giving back to our communities with the same rigor as we do in minimizing the negative impacts of manufacturing.

A leader in sustainability, Humanscale leads by example by not only reducing our own carbon footprint, but also reversing the environmental impacts of others. We actively contribute to an organization that prioritizes the preservation of ecosystems: World Wildlife Fund (WWF).
