

V/DESK HIGHLIGHTS

Combining a work surface with a keyboard tray and mouse holder, V/Desk allows caregivers to effortlessly integrate writing and data input into their workflows.

WORKFLOW INTEGRATION

V/Desk was developed to allow caregivers to interface with their technology while accessing their hard copy documents, such as charts. This seamless integration helps to streamline the caregiver workflow, so patients are always the priority.

VERSATILE APPLICATIONS

V/Desk can be used with all of Humanscale's technology wall stations. When installed on the V7 or V/Flex, V/Desk is equipped with a handle that allows caregivers to easily move the unit along the wall station's track.

COMPACT, DURABLE DESIGN

Due to V/Desk's innovative design, it encourages caregivers to move the keyboard out of the way when not in use. And, with the ability to be folded up within close proximity to the wall, V/Desk saves space. Extremely resilient, V/Desk has a nylon work surface that won't degrade from the application of hand lotions.

VARIED HARDWARE SUPPORT

V/Desk accommodates a wide variety of keyboards and mice to support already existing healthcare equipment. Its keyboard tray extends nearly eight inches, allowing caregivers to access the essential function keys.
